

2020 Product Catalog

To our Customers

CORE Rifle Systems from the very beginning, set out to establish our CORE Values. These are not descriptions of the work we do, but the strategies we employ to accomplish our mission. These are values that underlie our work. How to manufacture quality parts that interact with each other flawlessly and what strategies we employ to do so.

Some of the most important to us are:

Dependability - Our firearms are built to work as hard as you do.

Reliability - Whether it's shooting on the range or used in the line of duty, performance matters with CORE Rifle Systems.

Commitment to Excellence - Every part manufactured by CORE must pass a precise inspection before it is used on the building of our firearms.

Consistency - Every barrel we manufacture is tested for stringent consistency before it is deemed acceptable in the building of our firearms.

Innovation - Our engineers work tirelessly on new ideas to implement into our builds both current and for the future.

Creativity - By listening to our CORE "users", we take all these ideas put forth to us and test them rigorously to warrant them a spot in our line up.

Respect - With the ever changing industry, we know that our consumers and dealers have choices. Our commitment to accuracy, quality and reliability does not go unnoticed. It has earned us respect among other industry leaders.

These CORE Values are the basic elements of how we go about our work every day. By you putting your trust in our company, we have absolutely met our number one goal and that is your "Loyalty" to our brand!

Thank yon, CORE Rifle Systems Team

The CORE Rifle Systems Warranty

The Product you have just purchased has the simplest, most plainly written warranty you will ever read. There is no fine print. This CORE Rifle Systems product has been manufactured and assembled with painstaking care and precision by proud U.S. Veterans and Craftsman, trained by the best there is. If anything is not as it should be, accuracy included, if anything malfunctions, simply contact one of our professionals and we will work to make it right. If you're the 5th owner and the rifle has seen 40k+

rounds, it simply...doesn't...matter. We stand behind our rifles and we take care of our customers. We will cover anything other than normal wear & tear, abuse or neglect. That is our solemn promise and your assurance.

Mil-Spec and Mil-Standard Explained

In the firearms industry you hear the term "Mil-Spec" thrown around quite a lot. Let's talk for a minute about exactly what the term means. A specification is a standard to which the end user, in this case the US Military, wishes something to be made and held to. The primary reason for this is consistency and interchangeability. Within that realm, and for what the military standard covers, there still remains a vast span of places and areas to "tighten up" if you will.

Let's take a look at a few of those places.

The barrel arguably needs to be a very consistent and well-tuned part of the rifle. The Military Standard for a 14.5" M4 and 20" rifle barrels, requires consistency of .0010 from front to rear. Here at CORE, nothing less than .0003 will make it through our inspection process which is twice the military standard specification. Indeed, that inspection process itself is 10x tighter than what the military requires, which is a 10% inspection rate. We inspect and test fire 100% of our barrels.

Beyond the barrel, in getting to the action, simply keeping within the guidelines of Mil-Spec conformity is not enough for us. Going above and beyond, both in fitment, finish quality and internal parts, we do everything possible to take the AR-15 platform to the next level. This shows through in the accuracy, consistency and durability of our rifles. But don't take our word for it. Find your nearest CORE Rifle Systems Authorized Dealer and see if you don't agree.

Team Shooter Cheyenne Dalton

Cheyenne lives on a family farm in Missouri surrounded by fields and woods. She started shooting with her father at a young age, and soon after, the competitive shooting bug bit her. She started shooting rimfire challenge and USPSA in 2014 and then 3-Gun in mid-2015. She enjoys the outdoors and loves to go fishing and hunting with her family. Cheyenne is home schooled and enjoys playing Bluegrass music with her band, "That Dalton Gang". Cheyenne plays violin, mandolin, guitar, and upright bass. She started playing the violin when she was 5 and from there, it has blossomed into guite a career.

Team Shooter Jeremy Young

A hardworking, dedicated and trustworthy family man best describes Jeremy Young as a person. Jeremy is an eleven year Marine Veteran and was a designated Marksman Instructor and Primary Marksman Instructor. Growing up in the mountains of West Virginia, Jeremy has always had a passion for guns. Jeremy has been shooting competition since 2003. He is a Senior Federal Agent for the United States Government where he is a Designated Marksman and a firearms instructor.

Competition started for him back in the Marine Corps. Following his career in the Marine Corps and he continued to pursue local competitive shoots beginning with shooting steel challenge. Today Jeremy shoots USPSA and 3 Gun. He has progressed from local shooting club matches to competing in local, regional and major 3-Gun matches around the country.

Team Shooter Maximus White

Maximus has been practicing gun safety his entire life and was raised hunting, fishing, trapping, and shooting. At age 4, he started shooting .22 rifles. At age 5 he added .22 pistols and a .410 shotgun, and by age 7 he was shooting his very first AR-15 rifle.

Maximus most recent accomplishments are 3x Steel Challenge Grandmaster, Steel Target Paint South Carolina State Championship 1st place in Preteen LTD, Preteen RFPI, Preteen PCCO, Junior LTD. 2018 Extreme Powersports Georgia Steel Challenge State Championship (Tier II): 1st Place Overall Preteen, Preteen LTD, Preteen RFRI, Preteen PCCO and Junior LTD.

What's New for 20**20** CORE15® **M-LOK SCOUT**

"The legendary CORE line of rifles has a new sibling to make room for!"

The CORE Rifle Systems development team has been busy putting together an affordable rifle, with the current market trends and influence of the U.S Army to convert from KeyMod to M-LOK.

Designed specifically as an entry level tactical rifle, all components are of the highest quality materials made in the United States of America, crafted and engineered by U.S. Veterans.

This rifle model has a free floating 15" M-LOK black anodized rail with laser engraved T-Marking. Equipped with a nitride coated BCG and CORE V.2 charging handle. This rifle stays true to mil-spec with a military style pistol grip and stock, allowing new owners to customize this rifle to their needs.

CORE15® C9 9mm Rifle

Core Rifle Systems is proud to introduce our new line of AR 9mm pistols and carbines!

The new C9 is a ground up, original design. This is not a hybrid or modified AR. This all billet 7075 t6 Aluminum, all ambidextrous 9mm platform is designed around the Glock magazine system. Designed specifically for Team Core's professional shooters, this sleek little package delivers superior performance.

All components are of the highest quality U.S. materials, crafted and engineered by U.S. Veterans. The bolt carrier is a non-rotating blow back operation providing excellent function in its simplicity, made of the highest grade 416R stainless steel. The last round hold open functions flawlessly, while the unique ejection port provides trouble free cycling. The pistol model has the legendary SB Tactical PDW brace, while the carbine has the awesome Magpul CTR stock.

They are both equipped with a Samson SX Series M-LOK rail system, while the barrel is completed by our award-winning Core muzzle brake.

CORE15® C9 Pistol & C9 Rifle Standard Features

LOWER RECEIVER	CORE15 [®] Billet Lower Receiver CNC machined from solid 7075-T6 aluminum alloy integral trigger guard, beveled magwell for improved reloading speed, machined chevrons in front of magazine well, bullet pictogram safety markings. Black cerakoted finish.
UPPER RECEIVER	CORE15 [®] Billet Upper Receiver, CNC machined from solid 7075-T6 aluminum alloy, (1913 picatinny scalloped rail flat top) w/dry lube internal finish and laser engraved T-markings.
BOLT CARRIER	CORE15 [®] 416SS Bolt Carrier that features an innovative AR style ejector and extractor.
GAS TUBE	304 Grade Stainless Steel

Gas Impingement and Gas Piston **Operating Systems Explained**

If there is any one subject in the AR-15 community that has folks talking, it is certainly piston driven operating systems. While still relatively new to the scene, piston systems have definitely garnered plenty of attention. The first and most obvious question to those new to the subject... just what is a piston operated AR? To answer that properly, it's best to first step back and take a close look at the original concept, direct gas impingement.

In direct gas impingement operation, a small hole is drilled through the barrel, where upon after the bullet passes by a small but potent portion of the still-expanding gases are vented through and into a stainless steel tube. At that point the gases are directed back to the action itself, driving back the bolt and cycling the action. While battle-proven and highly reliable in its own right, the basis of direct gas operation puts a tremendous amount of heat and no small amount of fouling directly back into the action itself. If kept clean and properly lubricated, this system will continue to cycle and function for many thousands of rounds.

With a piston-operated system, the same hole in the barrel exists and the gases vent through it in turn, but that is where the similarities end. In place of the stainless steel tube is a solid, machined rod of steel (commonly referred to as the op-rod). When the gases vent to the gas block, they interface on a plunger around which the op-rod is fitted. The steel rod, running across the same space that would be otherwise occupied by the gas tube, interfaces on the bolt carrier. When the gun is fired the expanding gases push the rod back in turn acting upon the bolt and thus cycling the action. Any excess gas is vented off at the gas block itself, well in front of the action and the shooter. This system is cleaner in operation and has a markedly different recoil pulse or "feel".

The main aspect to keep in mind when comparing these two aerations is that both are solid, well proven systems in their own right, each with its own strong points. In deciding which one is right for your application, just know you can't go wrong either way. If you have any further questions, the answer is as close as visiting our web site or your nearest CORE Rifles Systems Authorized Dealer.

CORE15® HARDCORE SYSTEM X Rifles

This latest addition to the CORE family of quality products includes a multitude of base features and is available in four feature packed systems: HARDCORE X1 and X4. This new rifle system is the result of many hours of research, development and testing across all venues.

CORE's Lifetime Warranty coupled with other features that are unique to the HARDCORE line, this new rifle product line is chambered in .223/5.56x45mm NATO or 6.5mm Grendel, and has the potential of rivalling other rifles well above its price range.

Features included: CORE Rifle Systems "Factory Accuracy Guarantee" to shoot sub MOA, an all-new matching serialized

CORE15[®] Billet Upper and Lower, CORE15[®] Nickel Boron Bolt Carrier Group, CORE15[®] Barrel made entirely in-house that starts with premium raw 4150 steel cut to length, drilled,

rifled and profiled. The rest is black magic only found in CORE's barrel processes. Followed up by testing each barrel for quality, accuracy and reliability. This includes a CORE15[®] Extruded Aluminum Keymod Rail, in-house Cerakote finish as well as many other exciting features. To round things off, a Boyt HM44 Hardshell Case, MAGPUL[®] 20 and 30 round magazines, Range Log, Otis Technologies MSR/AR cleaning system and a Frog Lube Tube[®].

All firearms are assembled and test fired to ensure the highest of standards in this new all billet platform. We also include a test fire target and a CORE Range Log to track all of your range sessions for the life of this rifle.

HARDCORE SYSTEM X Standard Features

....

In our pursuit of excellence we invested in the Bill Wiseman Accuracy Test Fixture. During the test phase, we mount completed uppers onto the test fixture and lock it in just as you would on a complete lower. We then insert a typical magazine and fire for effect. The Test Fixture employs a pneumatic firing process which means no human error on manipulating the trigger. It fires the complete upper the same each and every time. By doing this, we look for initial groupings down range. We look for consistent three-hole groups on the target.

Our most important goal is to achieve a tight three shot group on the target consistently. This also works extremely well on zeroing optics to the upper.

The results with our CORE Rifle Systems barrels have been amazing. It gives you immediate feedback on accuracy and consistency. We use the Bill Wiseman Accuracy Test Fixture on both .223/5.56 and .308 platforms manufactured by CORE Rifle Systems.

With the popularity of large caliber automatics growing every day, CORE Rifle Systems is proud to offer our CORE30[®], combining CORE Rifle Systems relentless dedication to the cutting edge with the tried and true power of 308-class cartridges, the results are nothing short of astounding.

Born of a solid block of 7075-T6 aluminum, the CORE30[®] line combines CORE Rifle Systems trademark precision and unerring attention to detail with the finest parts and materials available. Machined in concert with the popular SR-25[®] style platform, parts interchangeability, after-market parts and magazine availability are not a concern. With four distinct models covering a wide range of uses and situations, there is truly something for everyone. From dedicated tactical platforms for our LE and government, to the incredible precision of the LR line. If speed, distance and knock down power are your needs, the CORE30[®] line of rifles will accommodate your every need.

2015 SWAT ROUND-UP INTERNATIONAL CHAMPIONS Special Weapons and Tactics Unit (SWAT) - Marion County, Florida

Twist Rates Explained

One of the biggest single leaps in firearms technology came in the mid-16th century when it was discovered that imparting spin to a projectile greatly increased the accuracy and range. Ever since that time ballisticians and engineers alike have debated endlessly the merits of one twist rate over another for a given caliber, projectile, and distance. Over the last 20 years, advancements in technology and production have given us unprecedented capability to fine tune our barrels and twist rates.

Thanks in large part to the work of those aforementioned intellectuals, there is very little mystery in choosing a twist rate for your next .223/5.56. The single phrase to keep in mind is "the heavier the bullet, the faster the twist rate needs to be". For the all around shooter, a 1:7 or 1:8 twist rate will stabilize virtually all commercially available projectiles for the .223 and 5.56 NATO. If you plan to do quite a bit of shooting with very light, fast projectiles (varmint hunters take note), moving to a 1:9 twist barrel would be an excellent idea. For the majority of shooters to whom the .223 and 5.56 NATO bullet weights begin and end at 55 grains, any of the above will work wonderfully. The one shooter that truly needs to take note of twist rate is the long range, heavy bullet enthusiast (64 gr or heavier). For that type of shooting, one of the faster twist rates are a must.

While entire books have been written on nothing more than twist rates and the ensuing stabilization, we sincerely hope the above has taken some of the mystery out of selecting a twist rate for your next project. Keep in mind if the rifle you prefer is not listed with your ideal twist rate, we are happy to customize. If you have further questions, please see your nearest CORE Rifle Systems Authorized Dealer or contact us directly.

CORE Rifle Systems firearms are amongst the most sought after rifles for the law enforcement community. Contact our LE sales representative at (352) 401-9070 for these and other models.

We also can assist in the design and build around each departments needs.

Carbine and Mid-Length Explained

The debate between Carbine and Mid-Length systems has raged for quite some years. The first thing to understand is that there is no right or wrong answer – simply advantages and disadvantages. As you've seen here at CORE, we're willing to cater to either preference. However, a little insight and education on the differences may help in your decision.

The primary consideration when choosing either way is overall length of the barrel. The operative measurement here is the distance from the gas port to the crown of the muzzle. This is the amount of barrel that remains after the bullet has passed the gas port and is thus forcing highpressure, high-temp gases into the action. This is commonly referred to as dwell time. Having the gas port closer to the crown, as with a midlength system, reduces dwell time and thus lessens the total volume of gases forced back into the action in cycling. The advantages here are a moderately reduced recoil pulse, overall smoother operation and reduced wear on parts, with the trade-off being very slightly reduced reliability under extreme or exceptional conditions.

As for carbine length systems, that dwell time (again, heavily dependent on overall barrel length) can be significantly higher. The carbinelength system will force more gases back to the action over a longer duration, barrel lengths being equal. This imparts more force to the key and carrier, thus cycling the action quicker, with more authority and with an exceptional level of reliability, though the trade-off comes in the form of an increased recoil pulse and lightly exaggerated parts wear over time.

As you can see, neither system stands head and shoulders above the other. They are simply two variations of an operating system that gives the shooter one more option to tune their weapon to a specific usage. Hopefully this quick explanation has given you an idea of what those are, and will help you decide on which system is best suited for your application.

.22 LONG RIFLECORE15[®] Uppers

What better way to shoot a .22 LR than shooting it through an AR platform?

Our .22 LR uppers are not just a "drop in conversion" but also rather a dedicated .22 rimfire upper.

With the same feel and function as a standard AR-15, the .22 LR uppers from CORE will allow you to train with your existing lower receiver thus giving you an inexpensive way to make yourself more efficient with your weapon system.

CORE15[®].22 LR uppers utilize the correct 1:16 twist rate for the .22 LR round and eliminates the problem of fouling AR-15 gas tubes with dirty rimfire ammunition. Our .22 LR bolts are Nickel Boron coated to give them the utmost lubricity and efficiency while firing and making them easier to clean and maintain. CORE's dedicated .22 rimfire uppers come with one (1) Black Dog Machine 26 RD Magazine.

Genuine CORE Barrels

From the beginning, CORE Rifle Systems has exercised a relentless pursuit of vertical integration. That is to say, the more parts of our rifles we make in house, the better. With that tenet in mind, we knew one of the most significant steps we could take was to bring our barrel manufacturing under our own roof. We are proud to say that after months of hard work, investment, testing and retesting, every rifle built here at CORE will come equipped with a genuine CORE Rifle Systems button rifled barrel.

From the start, we had no intention of settling for just any run of the mill barrel. We tested barrels from several of the largest industry suppliers and used those as a baseline to be exceeded at all costs. To that end, we spared no expense in maintaining the production standards everyone has come to expect of CORE Rifle Systems to produce a truly world class barrel. While the term match grade is thrown around with reckless abandon, we have the highest level of confidence that the barrels coming out of our facility will meet whatever YOUR definition of that term is. To back that up, our industry-leading CORE Warranty puts serious teeth in that claim.

Forged and Billet Explained

FORGED

Our Receivers start off as impressions from a die referred to as a closed die forging. The aluminum is then placed in a die resembling a mold, which is attached to the anvil. Usually the hammer die is shared as well. The hammer is then dropped on the workpiece, causing the metal to flow and fill the die cavities. The hammer is generally in contact with the workpiece on the scale of milliseconds. Depending on the size and complexity of the part the hammer may be dropped multiple times in quick succession.

BILLET

Bar stock, also colloquially known as billet, is a common form of raw purified metal, used to manufacture metal parts and products. Most metal produced by a steel mill or aluminum plant is formed (via rolling or extrusion) into long continuous strips of various size and shape. These strips are cut at regular intervals and allowed to cool, each segment becoming a piece of bar stock. A good analogy is pasta making, in which lumps of dough are extruded into various cross-sectional shapes (from simple bar or tube shapes, such as linguine or penne, to more elaborate extrusions, such as rotelle, fiori, or rotini); cut into lengths; and then dried in that form.

Both styles of manufacturing give you high quality, durable components. All of our receivers are made from 7075-T6 Aluminum.

EXCLUSIVELY from CORE Rifle Systems

Made from a solid piece of aluminum that has been heat treated, stress relieved and ready to be machined. Billet receivers are stronger and can hold a tighter tolerance than a forged receiver.

Our unique CORE15[®] low profile beveled magazine well gives you a faster acquisition for inserting and releasing magazines.

The CORE15[®] Hardcore Oversized Trigger Guard is designed to accommodate shooters with gloves and is ideal for law enforcement and 3-gun competition shooters!

- CORE15® Hardcore Billet Lower machined from solid 7075-T6 aluminum alloy

MSRP: \$19.99 SKU: #12137

OTIS Elite Cleaning System MSRP: \$142.99 SKU: #10791

Whether a hunter, competitive shooter or collector, gun owners understand the importance of taking care of their investment. Having all the right tools in one complete and portable cleaning system at camp, at the range or at home keeps firearms in top condition. Specifically designed for .17 to .50 cal. rifles and pistols, .410 to 12/10 ga. shotguns and all in-line muzzle-loaders.

- Over 40 firearm-specific cleaning components in a nylon case
- Six (6) Memory-Flex[®] Cables of varying length for effective and correct Breech-to-Muzzle[®] cleaning
- Twenty-three (23) bronze bore brushes remove copper deposits and other fouling
- Obstruction removal tools for jammed cases and other blockages
- Specialized precision tools for complete breakdown and fine cleaning of all critical and hard to reach areas of your firearm
- Optics cleaning gear for care and maintenance of scopes, range finders and more
- Removable Tactical Cleaning System (Item # FG-750) for convenient carrying in the field
- Dimensions:15 1/4" x 8 3/4" x 4 1/2"

OTIS Reload MSRP: \$8.99 SKU: #10793

The Otis Reload includes two .5oz tubes of Otis O85[®] Ultra Bore[®] Solvent, and 50 all-caliber cleaning patches. The Otis O85[®] Ultra Bore[®] Solvent is an allin-one cleaner, lubricant and preservative, and can be used on any firearm finish. The all-caliber cleaning patches can be used on all firearms from .22 caliber to 12/10 gauge, and can be used up to 6 times per patch. They are 100% cotton and provide 360 degrees coverage in the barrel.

OTIS MSR/AR Maintenance Tool Set MSRP: \$12.99 SKU: #10794

The MSR/AR Maintenance Tool Set contains the tools to clean some of the most critical parts of your firearm that would have been nearly impossible to clean before. Included in this set are a scraper, a locking lug scraper, a straight pick, a pin punch, a nylon end brush, a compact receiver brush, and two rod handles. These tools will not scratch the firearm, and with them you can now thoroughly clean areas such as the locking lugs, the slides, bolt face, rails, and any other hard to reach places. These components can be ordered as separate add-ons to all kits, and will fit in existing softpacks!
